

This diagram illustrates a cable control system for a vehicle seat. A central cable, labeled 47215, is shown in a wavy profile. It is connected to a central mechanism that includes a pulley and various adjustment components. On the left side, a cable end is connected to a seat base. On the right side, the cable is connected to a seat backrest. The central mechanism features several labeled parts: 38132 is a component on the right side of the central pulley; 38133 is a component on the left side of the central pulley; 38134 is a component on the far left; and 43951 is a component on the far right. The entire system is designed to provide adjustable support for the seat.
